

Netflix N' Chili

By the 3 G's: A Geek, a Goth, and a Gal

USER STORY

- (1-minute elevator pitch)
- Movie watchers will enjoy using Netflix N' Chili to see if Netflix is showing what movie they want to see and pair it with a delicious Chili recipe.

- User enters a Movie Title and clicks Search
- The Movie Title appears in the form to the right with a description
- A random Chili recipe appears in the box below with an image, ingredients, and directions
- Past recipes list in a form below the Movie Search form

PROCESS

- Used Github Project Kanban Board to track tasks and the development process:
- Used the fetch function to call and return needed data from the Netflix and Chili recipe APIs.

CHALLENGES

- There is a security vulnerability with the Netflix API key because it is difficult to hide with a public Github. The API subscription will start charging your credit card after the use threshold is met.
- Finding a modal that embeds seamlessly in a form without a separate alert or prompt was difficult at first.
